

Solar Energy Applications Research Group of Monash University Presents:

SUSTAINABLE ENERGY DAY - 2002

Wednesday July 17, 2002, Monash University, Clayton Campus

This Symposium is dedicated to people who believe in the creation of a world where children and grandchildren will be left with air they can breathe and water they can drink

Proudly Supported By:

Sustainable Energy Day –2002 is organized by the Solar Energy Applications Research Group of Monash University and supported by some International and Australian Institutions and Organizations.

Leading Australian scientists, engineers, architects, representatives from the Australian governments and utilities, decision makers, experts from the energy industry, universities and research institutions, technology providers and consultants will meet at the Monash University to share their experience about the latest scientific and technological developments as well as policies related to the introduction of renewable energy in the communities of Australia. The local government is playing an increasingly important role in promoting the use of renewable energy.

Papers on the topic listed below are considered for presentation at the Sustainable Energy Day – 2002.

- **Renewable energy resource assessment**
- **Solar Photovoltaic systems**
- **Solar thermal systems**
- **Wind**
- **Biomass**
- **Renewable energy in the built environment**

Proposals will be accepted from anyone who has special knowledge in the renewable energy and sustainability fields. Program selections are based solely on the merit of the described work.

We look forward to seeing you at the Sustainable Energy Day –2002.
